THE PROBLEM

One decision, four hidden inputs — nothing connects them

WHAT ACTUALLY DECIDES THE ANSWER

A 5-step wizard that asks what real advice needs

1 Profile

Age, income, expenses, dependents, goals, emergency fund, risk 1-5

RULE ENGINE

2 Loss analysis

Your dates matched to real price history — cause, not guesswork

● LIVE DATA

3 Risk check

Capacity × willingness: the lower of the two binds

RULE ENGINE

4 Dual plan

Recommended-for-you and build-your-own, with reasoning shown

RULE ENGINE

5 Optimizer

Dip → top-up · drift → rebalance · volatility spike → hold

● LIVE DATA

Deterministic AI — runs offline, no API key, cannot crash on an outage.

Every number is computed in-app from yfinance data (12 live tickers).

Every claim is proven against real market data

1 · Why you lost — named & evidenced

PEAK_BUY

PANIC_SELL

HYPE_CHASE

CONCENTRATION

HOLD_THROUGH_CRASH

MISMATCH_RISK

"You bought 11 Feb, within 0.8% of the 90-day high — and exited 8.8% below the 30-day high."

evidence from real price history · explained in beginner language

2 · Dual plan — ours and yours

Recommended for you

110 – age glide path
+ emergency-fund gate

Build your own

live sliders · trade-off curve

High-risk path: live momentum, volatility & drawdown per pick · Low-risk path: SIP
3 / 5 / 10-year scenarios

110 – age

equity glide path — the older you get, the safer

min(capacity, willingness)

enthusiasm ≠ capacity — the lower binds

6-month fund gate

no equity until the emergency fund is full

Advisory logic is transparent: every flag, badge and number traces back to a rule or a real price.

TEAM04 · MATRIX HACKATHON 2026

DataNexus Advisor

DRIVENET · Data Science — an honest, data-driven investment companion.

Built on live market data via *planning*. If a deficit falls, the fallback is clearly labelled "simulated" — we never pass invented numbers off as real.

Live market data: SPY \$762.63

Educational tool — data-driven illustrations, not investment advice. Markets carry risk; past performance doesn't predict future returns.

How we got here

1. Why we ask: Beginners get simpler, moderated plans (with caution & experience), and your 1-5 willingness combines with your risk capacity later — the lower the score.

Past loss (optional)

Losses are tuition — let's make yours teach you something.

I've taken a loss before and want it analysed

DRIVENET · Data Science — an honest, data-driven investment companion.

Built on live market data via *planning*. If a deficit falls, the fallback is clearly labelled "simulated" — we never pass invented numbers off as real.

Live market data: SPY \$762.63

Educational tool — data-driven illustrations, not investment advice. Markets carry risk; past performance doesn't predict future returns.

How we got here

1. Age 28 equity anchor = 110 - 28 = 82% (target-date default).

2. Risk capacity 3/5 vs willingness 3/5 = binding + 1 (willingness) — Balanced.

3. Horizon 12y = bucket mix from 7-15y rule.

4. SIP Capacity: Emergency fund short by ₹120,000.00 — fund it first (~4 months), then start the SIP.

5. Emergency gate active: safety margin overrides aggression.

Capacity vs willingness

Risk capacity (financial reality): 3/5

State income, no major constraints: 3/5

Risk willingness (comfort with swings): 3/5

Binding risk level = min(capacity, willingness) = Balanced

Governed by your stated willingness is the limiter — your finances could handle more risk, but you don't want it.

Things we're watching for you

1. Build your emergency fund first (120,000.00 short of 3 months' expenses) — we've modelled a 2-phase start.

2. Review existing holdings for concentration before adding more.

3. Long horizon = time is your biggest asset — stay invested through dips.

Recommended allocation — Balanced

Debt 2%

Equity 78%

Crypto 2%

4 Dual plan

76% equity, guard-rail flags, step-by-step why

Explained, not told

Beginners see the why behind every number — no jargon, no guesswork.

Losses become lessons

Past mistakes are proven with real price history, then turned into rules.

Habits over hype

SIP and rebalancing replace panic, FOMO and regret.
